

## December 23, 2017 - Pre-Recorded World Satsanga for The Kevin Moore Show

### Transcript of Pre-Recorded World Satsanga by Guy Steven Needler:

“This is the World Satsanga on the 23th of December 2017 held in conjunction with Kevin Moore and The Moore Show. And again I shall thank Kevin for his work in broadcasting the Satsanga with those wonderful graphics and images that he manages to put onto YouTube, and make it more of an alive audio and visual experience as well as just being audio.

Kevin, as you probably know, has been traveling around the U.S. interviewing different individuals, different channelers. And I think he’s on his fourth or fifth interview right now, and it’s looking really good so far. He’s interviewed myself as well for his sort of spiritual documentary called “They Call Us Channelers” to try to understand the background behind channeling, what people do in channeling, and the sort of results that different people do and the different techniques they have as well. So it’s looking really good.

If you get a chance to look on his YouTube channel, he’s got some interesting sort of prelude videos that he’s done when he’s traveling from place to place as well. So it’s quite good, (a) he’s enjoying himself, and (b) it’s going to be a really useful piece of work this documentary. And I think it’ll probably go to not National Geographic or Discovery channel, one of those channels that are sort of on the digital network.

Okay, before I start, I just want to let you know, if I’ve been a bit slow in responding for the last week or so, and I probably will be a bit slow until about the 3rd of January [2018] as well, it’s because my father ascended on the 9th of December 2017. He was very ill with Parkinson’s disease. The variant of Parkinson’s disease he had was a bit similar to motor neuron disease. He didn’t shake but everything was slowing down to the point of being inoperative.

And the Tuesday before he went, he actually said that he didn’t think he would be around this long. And I think that he decided to go quite quickly, because literally two days after that he was really ill and ascended 22 hrs after being put into a hospital. Actually, no, was it 22 hrs? Yes, it was about 22 hrs after he was in the hospital. So just to let you know if I’m a bit slow, it’s because I’m having to deal with all sorts of funeral arrangements and sorting things out and letting people know and all the rest of the paraphernalia that surrounds someone in this state as well. So I apologize if I’m a bit slow in responding at times.

We’re going to go through the Hidden Technology of Ancient Egypt, which is a legacy from Atlantis. And actually this is Part 1 of 2. I’ve decided that the first part is more to do with tangible technology, stuff that has disappeared but which was used in ancient Egypt. And I’ll focus on two or three pieces of technology that were used. What I’ll be talking about in January, in the Satsanga on the 27th of January in 2018 is to understand the energetics behind it — and that’s not specifically how those devices worked, it’s the mental capabilities or functionality that the Egyptians had, certainly those who were trained — the high priestesses, those sort of things, the hierophants, that level of individual, who were really self-realized and were able to work with Source, the Higher Self and all the other capabilities associated with being higher frequency. So I’ll work on that in January.

Next there will be a set of questions. There’s a group of questions that are quite interesting I think. And then we’re going to do a final end of meet meditation to go through how to connect with the soul in the soul seat, so it’s really connecting with your own soul, so to speak. Okay.

## Part 1. Lecture on “The Hidden Technology of Ancient Egypt — a legacy from Atlantis”

So exactly what technology did the Egyptians have that was a carryover from the Atlantean period? Well, one thing is for certain — there is no evidence of it being there. There are lots of buildings, as we know, pyramids and other temples depicting life in quite complicated ways within Egypt. But apart from that which was stone, and therefore, could tell us as to time and provide a thought process for us all to work with in trying to understand the Egyptians and what they all worked with, there's nothing tangible that indicates the technology they were working with. Now basically, when Egypt was created, it was created as a function of — an instantaneous re-creation — as a function of the need to re-establish incarnate mankind's usefulness as a means of accelerating our evolutionary progression by being incarnate.

(5 min) And so Egypt was created almost instantaneously by Source and by those Curators working with Source, and of course, those other highly evolved individuals, who were working with the free will project, so to speak. And so there were a number of individuals, who were self-realized, who chose to stay behind and work with those individuals, who subsequently then started to incarnate. So there were a number of individuals from the Atlantean period, who stayed behind to help educate those people, who incarnated without knowledge of Atlantis within Egypt.

Now there were within the Egyptian population, there were people, who were pure enough or could be trained to be pure enough to be able to take on board some of the more higher frequential or mental functions associated with being able to work with some of these technologies. But the technologies themselves were in actual fact very, very divorced from what we know as technology now. Most of them needed to have an energetic link between the individual, who was operating them — call it telepathic, if you want to — and the function of what they did.

Now in Part 2 I'm going to mention the sort of the higher functions, the more spiritual functions of some of the higher priests and the hierophants within Egypt, and that will identify how they managed to control these devices. But the devices themselves were basically things that controlled the environment. They had devices that controlled the weather. They could create rain when they wanted to, in the area that they wanted to, for the length of time or duration they wanted to.

They could materialize new objects out of the materials available in thin air. Or they could transmute objects from one particular form to another form. They could change the state of forms. For instance, the blocks on the pyramids and the buildings, these huge blocks, they were made to be as light as a feather by changing the density or the mass by changing the way that the atomic structure worked with each other, whilst not destroying the overall structure. So a huge block of stone, for instance, could be moved around very easily by one or two people without any stress or strain at all — put in the right place, and then a device would be put back onto that block to change it back to its natural form, natural density associated with that particular material that's being used or the element that's being used.

They could transport things from a teleportation perspective as well. They didn't need to have cars or airplanes. They could just with these devices move them from one place into another place. They could work with the energies of the plants and the trees and the bushes for crops, if they wished, and there was no need for any seasons. If they could work on the weather structure, then there was an all year round season that was the same season. And so they could also work with the way in which the crops worked, so they didn't become seasonal crops. They would be creating crops all year round.

So they lived what appeared to be a very simple existence, because the technologies that we have around us now isn't sort of simple, but they were technologies that without a doubt were labor saving. They enabled them to communicate long, long distances irrespective of whether they used telepathy. They could use again the same as with mobile phones and video phones and computers and everything else, they could use similar things to communicate with other beings in the locale of our solar system.

(10 min) And they were very close to (well, the higher priests anyway) and drew a lot of source of understanding from those incarnate beings that are in the Sirius area — Sirians, if you want to call them that. And so those particular beings, they were "lionoid" [lion people/feline race] in their vision, so to speak, were in constant communication with them. Hence, the constant reference to lions in the Egyptian period, whether it was a lion of the Sphinx, for instance, or whether they were shown using lions to pull their chariots. The lion on Earth, of course, weren't as intelligent as those lionoid sort of incarnate vehicles that were from Sirius.

But in effect the association with the Sirians or the population from Sirius was a focus for them, and they tried to use everything that was similar to this race to remind them, that they are in communication with this race. They didn't come all the time. They weren't there all of the time, but they did come enough sort of on a semi-regular basis, which could be a couple of times within a lifetime of one particular individual or they could visit in between some of these lifetimes. So somebody who was born and died may not see them, but somebody else might see them twice in their lifetime, for instance.

The Egyptians also had some of the technology, that was used to heal the body or change the body, for instance, and we see images associated with half-man half-animal humanoid forms. Now these humanoid forms are basically again the result of medical technology that was brought from Atlantis, and to change your form was considered to be a function of higher status and higher wealth. And so some of the Atlanteans, who were working with the Egyptians were stuck in those forms, because they didn't have the technology available to them. That's one technology that was banned by the way to Egypt, because it was one of the technologies that was considered to be part of the downfall of Atlantis.

But they had all sorts of different technologies that were not what we would consider to be used now. They could even change the orbit of the Moon to help with the energy of the Moon to help plants grow, to change things, like in some other areas of the world, where there weren't any seas, they could change the height of the tide. Now around the Red Sea area, there is very little tide, tidal movement at all. But they could change it, so they could harvest some of the...they could change the Moon's location, so they could use the Moon's gravitational pull to remove some of the sea from a particular area, so they could harvest things like fish and those sort of things or gain other minerals or other elements that are available on the sea bed.

So they had these devices, which created immense levels of attractivity. Not only did they have devices, that could make materials light, but they could make them extremely heavy as well. So they could make a feather, for instance, weigh several hundred tons, and therefore, it would sink into the Earth, for instance. And that's another way in which they would make, for instance, foundations. And actually some of these things are available in books already. There's some people, who have written books based upon memories of their previous lives, who broadcast what they experienced. But they were able to do like a lot of different things, that are associated with transmutation of form and energy and mass and substance.

(15 min) The weather is one thing that I've just mentioned. But actually there is a gentleman, who is using various different materials together in unique combinations or laminates and in various different shapes, that can affect the etheric associated with the weather system of the Earth and can create rain, for instance. And this gentleman and my late father-in-law, Dennis

Milner, he showed me a number of different videos of this gentleman showing some of his devices on boats and on airplanes, and showed areas that were completely cloudless suddenly become cloudy and start to rain, when he started to work with these devices. Some of them had to move or rotate. Some of them had to move on a vessel or a boat or an airplane to make them work. Some of them just needed to be stationary. And you could see that he was able to manipulate the local environment and create a weather system to be able to create rain for those areas that needed it. And this is a similar technology to what the Egyptians had, that was a legacy from Atlantis.

They could also move into the sea. I mean they had the ability to create an environment around them. Now we use diving suits or diving bells or submarines to go into the sea. But some of the devices that the Egyptians had initially that were Atlantean were basically a device, that created a shell, like an energetic shell around them, that means that they could still breathe air and move through the water, as if they were on land. And so they were able to move around and achieve things in the water with this little device attached to them, because it created an air environment around them basically. And so they moved around as if they were in the air, but they were underwater. This enabled them to do work underwater in terms of gathering minerals, creating structures.

And if they weren't using the Moon, for instance, which was quite dramatic — they only used the Moon's gravitational forces or manipulated the Moon in needs of serious, shall we say, civil engineering, i.e. moving of seas or changing the tides of a sea to being quite dramatic on very rare occasions. Normally they would use these other devices that allowed them to be underwater, that created an oxygen environment around them and allowed them to move as if they were on land, so to speak.

They had a number of other different things. They could increase the frequency of the local environment themselves, which would allow them to without meditation and without work raise their frequencies to the point where they could work on the next frequency level. And so therefore, they would be able to communicate with other entities, incarnate or disincarnate, on a temporary basis by the use of this mechanism, that would temporarily raise their frequencies.

And so they were in communication with and in cooperation with those individuals, who have moved up to a higher frequency, or those other beings, incarnate or other, that populated the higher frequencies of the Earth. So the 4th, 5th, 6th and 7th frequencies or up to the 12th they could access by literally dialing in a frequency and they would sort of zone out of this frequency and zone into the next frequency, and be able to work with beings, entities on those different levels as well.

(20 min) They didn't need to use things like telescopes. They had the capacity to locally warp space, and so they could see all around the local galaxy and beyond by using a function of gravity to be able to see that which is available, that which is in existence let's say 30-40 parsecs away. They could zoom into that area by distorting space and time locally. It was quite a complicated piece of equipment, but it also removed this thing about light taking so many hundreds of thousands of years to get to us. So whatever they would be observing with this gravitational-based telescope, if you want to call it that, without a time delay associated with it, so whatever they will be seeing or observing or experiencing would be seen real-time rather than as a vision of something, which is thousands of years out of date.

They also had the ability to levitate things as well. Although they liked to use Earth-based vehicles, that were pulled by lions etc., they also liked to levitate. And they could levitate by using the devices to move around. They had platforms that they worked with, and they could move around on these platforms. They would transport things from one place to another by having a platform that would levitate. It's a function of antigravity and magnetism, it's what they

used. And interestingly enough, I'm just being reminded by Source, that this is where the legend of flying carpets came from. Because from the uneducated viewpoint, these platforms would look like they were decorated quite ornately, they would look like carpets flying in the air with someone sitting on them. They weren't flying carpets, of course, they were platforms with maybe technology, but they would look like it.

You know, if you were uneducated and all you know is that something that's flat and can be sat on is usually a carpet on the floor, and you saw something that's flat and that was sat on by somebody with other stuff being transported around, it looked similar because you don't get the perception of depth and everything else that's there, and you can't see the controlling features of the platform, you would think it would be a carpet. And so there's a lot of Arabian sort of stories of flying carpets, etc. etc. that are taken from sort of ancient memory of what was some of the technology being used by the Atlanteans and that had been passed down to the ancient Egyptians, you know, the very, very ancient Egyptians.

Okay, so that's a few things there, just some of the technologies that are there, and there's a lot more. For instance, how to work on creating light, everlasting light — it didn't use power, it just used the change in the frequential state in certain materials. There was no need for bulbs or incandescents or fluorescents or LED-based bulbs. It was all to do with changing the state of a material and that would change and allow it to glow. And the devices that allowed them to do that would mean that you could have this material fluorescing, for instance, forever or you could turn it off, if you wanted to as well by just changing the state.

So okay, that's just a few of the pieces of hidden technology that were in ancient Egypt, which is a legacy from Atlantis. How they were controlled, and some of the mental functions, the energetics surrounding them we'll discuss in the Satsanga on the 27th of January 2018.

So we'll now go onto some of the participants' questions, and hopefully we'll be able to answer those questions as well in a reasonable way. I don't actually revise these beforehand, so as a result, all of the questions are channeled on the spot, which is always interesting, because it means that there's no preconceived responses to what we're experiencing in terms of the answers to these questions. Okay, the first one is and this is from US.

## **Part 2. Questions and Answers**

### **1. You have said that there is no such thing as antimatter. But one of my readers wrote:**

(this lady is also doing some blogs on the greater reality and various different aspects of the greater reality, so she's doing fantastic work and she also writes the transcripts as well, so I'm really grateful for that — so this is an interesting question again)

**"Antimatter has already been found and studied in particle physics. Every time lightning strikes, it leaves behind a trail of antimatter." How do you explain that? (US)**

(25 min) Well, they think it's antimatter. Actually there's no such thing as antimatter, there's just matter, that transposes from one frequential level to another. And actually if it was antimatter, according to popular particle physics theory, matter and antimatter can't mix in the same space, so you'd have a bit of a problem basically in popular particle physics theory, that there would be an explosion or a reaction of some sort.

So what's happening there is basically when lightning strikes, there's a transposition of energy from one state to another, and what they're tracking is the change of state from the energy that's grounding on the Earth and going to a different level. You could call it a "quantum level" if you wanted to, but really it's a different frequential state. And the scientists' detecting machines now are getting reasonably good, although nowhere near as good as they would need to be to be able to completely trace and identify which particular frequential level this resulting change of state of energy goes to and what it becomes. But what they're seeing now is a little bit of it, so to speak — I'm being told about half of one percent (0.5%) of the change of state of what the energy within a lightning, electricity of course, within lightning changes from to.

So it's not leaving behind a trail of "antimatter," it's leaving behind a residual trail that's showing that it's changing from one state to another as a result of the immense force being exerted, the immense energy that's being exerted from the lightning, when it's grounding on the Earth or anywhere else, and the change of state associated with that as a result, or the energy that's being created as a result of the earthing changes the state of the energy, and therefore, it changes from one state to another in a higher frequency. And therefore, it goes, it disappears out of our visual and detectable range, but clearly there's a little bit of detectability that we've got now with the various different types of particle sensors, and they may even more do this in a particle accelerator, for instance.

But in effect, what we've got is a misunderstanding. It's a bit like "dark matter" — we give something a name because we don't understand it. Whereas in actuality, there is no such thing as dark matter, because the higher up the frequencies we go — I'll very quickly explain what dark matter is. Dark matter is supposed to be the space in between stars that holds the stars together, because everything's got this structure of where it all works. And although there's lots of black space in between stars and galaxies and nebulae, they're thinking that there must be some dark matter that's holding it all together.

Well, in actual fact, the higher up the frequencies you go, you start to see more things manifest on those higher frequencies associated with the physical universe. So it's not dark matter, it's just that the rest of the structure associated with twelve frequencies of the physical universe start to become manifest on the higher frequencies, and it's those things that hold it all together on the lower frequencies. And so the naming of "dark matter" is in error, because there is no such thing as dark matter, it's just understanding the higher levels of structure.

And with "antimatter" again, it's something that's being described as a basis of poorer understanding. I mean we think we, you know, scientists and medical professionals and all of these different people in research fully believe that they're extremely knowledgeable. A few choice individuals realize how much we don't know, and those are the individuals, who will move forwards, because they remove the paradigm around them that is currently here based upon our existing knowledge and look at things in a completely fresh eyes approach. And that's when we'll start to see that actually there isn't antimatter, it's just a different state, a change from one thing to another thing.

Okay, so it's just understanding that — it's again putting a name to something and the name makes us think of one thing and actually it's something completely different. It's a bit like calling a giraffe a dog for those of you, who have heard the giraffe and dog story in the "Traversing The Frequencies" lectures. It's looking at something and saying it's got four legs and a neck, a body and a tail, and therefore, it must be a dog, because the giraffe's got the same thing. Unless you

know the detail why a giraffe is a giraffe, you'd still think of it as a dog, if you saw a giraffe vs. a dog.

(30 min) So it's the same sort of thing. It's creating an incorrect level of education, which I hope in the future we will understand. And I'm deliberating this quite a lot actually, because I've read something somewhere, where a very clever individual — we talk about a monopole magnet, which don't exist, and they talk about one guy, a scientist who said: If we ever discovered a monopole magnet, then the whole of physics would have to be rewritten.

And that individual I feel was very enlightened, because he/she understood that there needs to be a complete rewriting of our knowledge, when we start to discover things and experience them for what they are, not what we think they are. And so we think that what happens when lightning strikes creates antimatter, it just creates a change of state of energy and frequency. It's as simple as that, and it goes into something else. I wouldn't call it "antimatter" — I would like to describe it in the correct way, but I don't have the words to do it. Okay, well, I hope that helps.

The next question is all about basically autism, which is interesting, because autistic individuals are very switched on. They're also quite connected to Source and generally have higher frequency thoughts, behaviors and actions. They're very trusting, loving, caring and wonderful people, because they don't have this hidden agenda that most human beings have, trying to make themselves better, bigger, stronger and richer. They just want to live and enjoy existence. So the first question is...

**2. What do people with autism or similar have to do when it comes to visualization? They often report images being blurry, not as clear or being unable to hold them for more than a few seconds. Other things they report is being too in their head and difficulty in seeing with mind's eye, so what could be the reasons for these? (US)**

My feeling is that they are being confused by what they're experiencing and by what the rest of the population around them are telling them they should be experiencing, so that creates a block. So if somebody with autism is told to meditate and visualize something, for instance, they would work in a way, which is going against their natural connectivity. So you start to get this struggle there between the way they normally work without any effort at all vs. how they're being told to work, which requires effort, because they're going against the flow basically.

And so really, they're struggling to work with the way that the rest of incarnate mankind wants them to work, because that's the way they work. But in real terms, they're ultimately connected all the time. So it's all to do with trying to conform. And this is the issue — they're trying to conform with what they're being told everybody else does and actually, they've got instantaneous understanding of what the greater reality is.

And even people with Aspergers syndrome are the same way. They have total connectivity. They don't need to work things out. They don't need to show how a mathematical equation goes from the start to the finish. They only need to show the piece in the middle, they just know, if you give them the question, that's the answer. They don't go down the road of justifying it or quantifying it. They know the answer, because they're connected, and they trust the connection. It's only when they happen to be put in this position, you know, you must work in this way, that it removes the trust in that connection, and things get blurry or difficult for them to work with.

(35 min) Okay, some other parts to this question to elaborate it:

- **It would be especially helpful also if you or somebody could write a guide designed for people, who are not 'neurotypical' in mind, that can offer instructions on how best to approach endeavors like astral projection, activating the third eye and do magick work/visualization.**

(35 min) Yeah, interestingly enough there's a book I'm going to write on healing, which going to be the book that is after "The Curators." The Curators should be finished in July 2018, but then I've got to go through an editing process. But this healing book may well have an Appendix at the back or something that is designed to help people work with what they are, rather than what they're told they should be. And that would help people heal, specifically people with autism or Aspergers, because they will recognize that the way they work is right, and the way that they've been told to work isn't right for them, and so that'll help.

So I may well put that in, as part of this book on how to heal and different healing techniques, both energetic and psycho-spiritual as well. I think this would go to the psychospiritual aspect, and so I shall look at this and also things like astral projection and different techniques for doing that. Obviously, the "Traversing The Frequencies" methodology moves you beyond astral projection, but activating the third eye, we can be put in that as well. So I'll look at that. Thank you. The next part of it goes back to Aspergers:

- **I've known people who are very upset that they can't visualize and communicate with spirits or entities properly because of Asperger/Autism Spectrum?**

What I'm feeling here is is that along with the standard human being, this is quite natural for everybody. So it's not specific to people with Aspergers or autism in the various different spectrums that sort of blur the lines between those two particular different functions or functionality. It's a common thing.

What we generally need to understand is that we have a function, a main function that we work with. It can be a tactile response to various different questions that we ask of spirit. It can be hearing tinnitus, for instance, that could be a way of recognizing that we've got an answer. Or we could hear with our mind's ear spoken words, usually in the language of our current incarnation. We can see visualizations as well, or we can have just knowingness. So you've got clairaudience, clairvoyance and clairsentience along with what I'm going to call "clairtactivity" as well, which is all the physical responses associated with it, such as tingling in the body or certainly around the area of the third eye and around the periphery of the skull.

So what I would say is that what we normally have is a response that is our dominant response. It might be visualization but not audio and not knowingness. It might be knowingness but not audio or visualization. It might be tingling in the hands but not audio, visual or knowingness. And so it's a case of which response do we get, but we ignore, because we want to have visualization or want to be able to communicate with entities. I think the thing is we need to sort of work on that first.

When I do the "Traversing The Frequencies" work, I get people who again get frustrated, because they're not seeing something, but they're hearing an awful lot and they ignore what they're hearing. And I get other people who hear an awful lot, but want to see. So again I just

repeated the same thing there. We've got people who wanted to experience something associated with a different function they've got. So if they're seeing things and they want to hear, they ignore the seeing, because they want to hear something, which is the right way around actually, as I've just said. So basically, you've got the different things, or for instance, if they want to know something and all they get is hearing or seeing or a combination of the two, they ignore this clairsentience side of it as well.

So we might have a major function of clairaudience or clairsentience, clairvoyance or clairtactivity (whatever you want to call that), and we might desire another function rather than the one that we work on. What we have to do is work with the one we're good at. Work with it, use it, trust it and progress with it and perfect that. That raises us through the frequencies and then we get to a stage, where because we're higher frequency, our functionality changes, and then those other functions start to come into it.

(40 min) And so then we might have clairsentience as well as clairvoyance. And then we work on the clairsentience and the clairvoyance, we start to get clairaudience or another combination of those. So it's really about working with what we've got, not worrying about what we would like to have, but knowing that provided we work with enough diligence and dedication that we will eventually get those other functions as a natural condition associated with being higher frequency, so it will come.

I've got plenty of examples in the "Traversing The Frequencies" (TTF) workshops, where people have, for want of a better word, they've done a whole day of TTF Level One and almost three-quarters of the TTF Level Two, and they've said I'm not seeing anything, I can't detect anything. So I ask what do you get? They say well, I hear things. I said well, hearing things is good. I said just work on that, work on that, you know, trust it. And then right at the very end, that particular person was feeding back what was experienced, and what was described straight away was seeing something. And I said you do realize that you're seeing something. And that person was like amazed they hadn't spotted it. They were so much focused on the desire for seeing something, that when they even saw something, had a visualization, they missed it, because the desire overrode the function.

So really it's about calming down and just going with the flow and working with what is working for you as a function. Okay, there is a bit more about autism in the rest of the questions. I've got some other questions in between, but this is the last of this particular series of questions. Right, it continues:

- **Furthermore, something people with it ask often is how do they participate in endeavors that involve communicating with beings, or work that involves relating to beings?**

When we work with other beings, whether they're incarnate or disincarnate, incarnate at a higher frequency or disincarnate (being not incarnate at all), we have to be very careful, because there are astral entities, who are lower frequency astral entities around the 4th and 5th levels or even the 6th, who take advantage of us by using our desire, our desperation to communicate with something and slot into our energies as a result of that.

So basically they look at our desperation and then fulfill our desires by talking to something. Well, we're talking to an astral entity, but sometimes they try and coerce us, and more often than

not they do coerce us, and they take energy from us as well. So we have to be very, very careful of what we do with it. We have to be discerning about who and what we communicate with.

Now the thing is that you can broadcast your desire, and this is one thing we do with the TTF workshops. We've broadcast our desire to enter into communication with any entities, and I would suggest that if you do that, you do it in a meditation, that you also broadcast that you only wish to communicate with those entities of high frequency. And you may say over, for instance, the 13th frequency level as an example. And so therefore, you'll start to get a more benign and benevolent function rather than an adversarial function in terms of what you're communicating with and the information you're getting.

So basically it's about sitting down, meditating, clearing the mind, focusing the eyes upon the location of the third eye, and really mentally stating that you wish to communicate with an entity, and that that entity should be pure, high in frequency and at least above the 13th [frequency] level, preferably the 14th and above, and just see what happens. Now the communication will come in several different ways, as we've just described. It will either be visualization (clairvoyance), hearing things (clairaudience) or knowing things (clairsentience).

(45 min) So it might not be that you'll pick up things like a communication as in the terms of a chat with them, for instance, a dialogue with them in that way. It may be that you feel a presence and something will come to you, some level of understanding. You can ask them questions about certain things: Can you describe something for me? Can you explain this? Can you explain that? And they will do so. But you might find it won't specifically be how you expected. It might not be like having a conversation in the way you think it.

I mean with my work, it can vary. It normally comes through in a variety of different ways, depending upon the information that's coming through. Some of it is clairaudience, quite a lot of it is clairaudience. I do get a lot of clairvoyance as well, when it's required, because explaining concepts should be explained in a number of different ways. And then lots of stuff I get just through knowingness, and then I have to sit there for a long time working out how I'm going to put this into words, because knowing is one thing, but writing it down in human terms is something else.

So it's all about sitting down, meditating, expressing your desire to communicate with any of the beings at a higher level, but specify pure beings, high frequency beings, and above the 13th and 14th frequency is best as well. And then just see what comes. Again with all of this stuff, don't try to logic it out. When we receive something, write it down. Don't judge it, don't question it. Don't try to work it out, just write it down. Because when you start to judge it, work it out or question it, then you lose the connectivity, because you're starting to doubt what's there. So a level of doubt is also a big issue in terms of not being able to work with other entities or beings, who are disincarnate or incarnate, or just general clairsentience about understanding things.

It's about understanding and working with knowing that what you're getting is right, and accepting it, being in full acceptance. And then write it down or if you've got a voice recorder, verbalize what you've experienced. And then just get the feeling of it as well, because in general we don't just get audio, visualizations or spoken word in our spiritual ear or knowingness, we also get feelings associated with them as well. So these are emotions, it's another means of communication as well. So again an emotional response might be a person's major functionality,

and so that should be used as well, and worked with and perfected to allow it to move up the frequencies to allow it to get access to the other functions that come naturally.

Okay, so I hope that's answered the question. I've rambled on a bit there, but I think it's going to be useful to people to understand that frustration blocks things. Just be in a state of beingness, accept the fact that there's going to be times, when you sit and meditate and nothing happens. Just enjoy the bliss of nothing happening around you, and that's the most important thing. Accepting the bliss and nothingness is one of the little tests that Source gives us to see if we're dedicated enough. We're always tested in various different ways to check out and make sure that we are dedicated and clean and pure. And so this is one of those ways, okay.

The next question from WP, who said that I hope I enjoyed my travels in Egypt and hoped that they were interesting, helpful and useful. So the first question is in reference to global warming.

### **3. Is Global Warming aka Climate Change caused by man or is it a result of natural weather cycles? (WP)**

- **The scientists of the 1970's were busy worried about Global Cooling. Recognizing that most people are not interested in fouling the air or water, what is the true agenda of the "Climate Change" movement?**
- **They call names and sneer at anyone who does not agree with them - not very loving, not very tolerant. Why the politicization of this topic? Are they really interested in the welfare of the planet or are they using this to advance a political/economic agenda?**
- **The United States has made dramatic strides in the past 40 years in reducing emissions, e.g. today's average combustion engine auto emits less than 1/10th of the 1970's auto emissions - and yet "the movement" acts like nothing has been done. If they are sincere, what exactly do they want to see happen?**
- **What about the massive pollution in Beijing and Shanghai [and there's also Taiwan of course], why aren't the believers putting pressure on China - in the mean time are any of them turning their thermostats down to 65 degrees in the winter and up to 80 degrees in the summer?**

(50 min) Alright, well basically climate change is a function of a couple of different things. Clearly human beings have an effect on the environment and we need to clean our act up, so to speak. It's very important for us to do that. The pollution that give obviously destroys animals, environments, such as makes rivers poisonous, pools or lakes poisonous, and it destroys the environment and the atmosphere, so that trees and plants can't breathe properly and convert the carbon dioxide (CO2) into oxygen in an efficient way.

So we have an effect without a doubt and we have an effect in all sorts of different ways. If you think about it, we don't just pollute the atmosphere with hydrocarbons or the exhausts of airplanes or motor cars or other things, we pollute it in terms of radiation. We pollute it in terms of radios, radio waves. Everything that we do or we create can be classified as a form of pollution, because the byproducts are whatever they are. I mean even our rubbish and our trash pollutes the Earth, because we just dig up a big hole and we put it in the big hole.

So we are affecting the environment in a dramatic way, but it's something that we can work on. We need to work on better ways of recycling and converting our vision to reusable energy. And working on how we move around the planet and whether those and our manufacturing

techniques, because everything creates some form of pollution. But the big things, like climate change, there is an effect on climate as a result of the pollution that mankind [creates], and certainly the ozone layers are a reasonable example of that.

But on top of this though, there is a bigger weather system associated with the Earth than we give credit for. And basically a lot of the things that we experience are a natural function of a large global weather system. And so when that global weather system is affected by the magnetic poles of the Earth, so if we have a pole change, that affects the way that the molecules or the atoms in the air and in the water and everything else interact with each other. So a pole change or a start of the pole change starts to affect the weather, the climate and things like the jet streams change direction as well. But that's something else.

The big weather system is misunderstood totally. I seem to remember a story about Scott, when he went to Antarctica, as I think I said before in a Satsanga a few years ago. But basically the guy who was working on the weather, the meteorologist, he looked at the weather system of the polar area that Captain Scott was working on, and said that: Right, you're going to have wind assistance in these months going in one direction, and on the way back, the wind changes and you'll have wind assistance coming back. When Scott went on his expedition, the weather system was completely wrong and that ultimately contributed towards their demise.

And the guy, who was the meteorologist, was absolutely bereft, because he couldn't understand why he'd had nine years of calculations and nine years of recordings, that showed that in effect what he predicted should work. But on this tenth year it didn't. And it was only a number of years later (about 20 odd years later), that he actually worked out what was going on.

(55 min) He was so bereft about getting it wrong and these people dying, that he dedicated the rest of his life to understanding what was going on with the weather in the polar region that Scott worked with. And he worked out that there's a bigger weather system, where every ten years or so the weather system changed for a year, reversed itself for a year, and then went back to what it was normally. So nine years out of ten the wind would be going in one direction, and then come back over a period of months, and then swap around over another period of months, and then the tenth year, for instance, it would change completely and be completely different. And then the 11th year and if we go up to the 12th and 13th year, it would be go back to being normal. And he worked this out, that there was a bigger weather system, a bigger series of changes there.

And this is what's happening with us. I mean that weather system, which is a ten year cycle is for all intents and purposes just a small weather system, that has weather systems within it. What we have is huge weather systems and weather systems within those. And so the big levels of climate change we're experiencing, not just pollution, is a function of big, natural weather cycles and weather cycles within weather cycles. And so we've gone from global cooling to global warming. And you know, it might change to something else — it might be global tropical, for instance, those sorts of things.

It's just a big natural weather system with cycles within cycles. In fact, thinking about it, I seem to remember a BBC Horizon program or a science documentary presentation in the UK. And I seem to remember a long time ago seeing a program where they were taking ice cores, and on these ice cores they could see the evidence of how weather had worked and what had changed and everything else. And they said you can see here for thousands of years, the weather

systems were the same, and in here things start to change. He said the weather systems changed here after a couple of thousand years and then you've got things changing over a hundred years, things changing over another 900 years, and then things changing within 20 years.

And they were saying that things can change really quickly or take a long time to change, depending upon where the cycle is. Now clearly the ice core was only a snapshot of a certain part of the bigger weather system, the bigger natural weather cycle. So in that respect, even with the ice core, they're only using a small snapshot of what the bigger weather system is, but it told them there is weather systems within weather systems and cycles within cycles within bigger cycles. And so we can change from one weather system to another really, really quickly. And I think they were talking between 20 and 50 years is one particular time frame in which we can change drastically from system to another system.

In fact, right now they were saying that we talk about global warming or global cooling and that's a problem, but actually they were saying that we are currently in a mini ice age. So if we go into a warmer Earth, it's a natural function of a bigger weather cycle. It's not climate change caused by man alone. Man has some contribution towards it, but in real terms, it's to do with a bigger weather system. Of course, the more cleaner we get in terms of everything, you know, from the burning of hydrocarbons or fossil fuels and creation of electromagnetic radiation and other radiation, and when we start to work on cleaner energies and cleaner manufacturing techniques, the less we will pollute the Earth and affect little changes within the environment as well.

So basically getting down to some of the other parts of the question, governments and people like to use these things for political justification of their own agendas. If it can be used to control people, it will be. If it can be used to justify the actions of a cause, it will be. And so really these people, who are climbing on the global change bandwagon really aren't doing it to help the Earth, they're doing it to help themselves. And it's as simple as that.

(1hr) Of course, at some point China and Taiwan and India, they'll start to get their act together and start to work in a more cleaner and pollution free environment as well, because they'll have to, because they won't be able to continue otherwise. It will be something that they have to do, not because they want to do, because they have to do it. Because they'll create so much pollution, they can't survive. So survival comes first, therefore, reduction in pollution will come as a result of that. Okay, the next question here:

**4. It is undeniable that free market capitalism although not perfect has dramatically raised the standard of living for more people than any other economic system in the known history of the planet.**

Well, that's apparently so, yeah...

- **Why then do otherwise intelligent people advocate and fall victim to socialism (including the Pope, Bernie Sanders, etc.) when there are countless examples of socialism's destruction of human dignity and well being including Cuba, Venezuela, Argentina, North Korea, the old Soviet Union/Eastern Europe to name a few? (WP)**

Simply put, socialism is a low grade response to the need to be in communion with each other. If we're in communion with each other in a total and complete sense, then we would work in a

way where everybody is working for the benefit of each other. And so nobody would be mega rich, nobody would be mega poor. Everybody would be equal in their education, in their ability, in their work life, in their home life, in their richness, their material wealth.

Everybody would be the same. And this is a utopian level that we would like to achieve on Earth, but it's something that happens as a result of being disincarnate anyway, because we all work together in communion. We're all part of Source, smaller units of Source Entity, of God, if you want to call it that. So we start to think of it in terms of we are better off working together collectively than we are separately.

But because we don't do it properly, then it starts to fall apart, because within the need to be in communion, commune-ism and social-ism being a branch of the same thing, we want to have this equality for all. But within these structures, there is still capitalism — there's still people who are, for want of a better word, selfish and want to have power over somebody else, or want to have more money than somebody else.

So although we'd like, the ideal is to be in a communal sense and in a collective sense — or a socialized sense where we're working for the benefit of each other, and nobody is richer or poorer than anybody else, and nobody's got more or less than anybody else — within that there is greed and that greed is a little spark of capitalism within the socialism, within the communism. And that's why socialism and communism doesn't actually work, because this capitalism builds into it basically, and that's human nature. That's low frequency thoughts, behaviors and actions that creates the failure of socialism and communism.

When we're higher frequency, the ideal of being in communion with each other will work, because we will see that we're better working for the collective than we are working for ourselves. Because if you work for the collective, then we benefit. Whereas at the moment, if communism or socialist states work for the collective, somewhere down the line there's some individual who is benefiting from it on the back of the collective, so it's a different thing.

So basically this is what happens. Intelligent individuals fall victim to socialism and communism, because they aren't working properly, because within it is a function of capitalism, and that's the reason for that. It's not pure. I'd like to think that when we go through the next frequential increase that we start to see things properly, and we start to work with each other properly, and then we'll naturally fall into a communal state, in a collective state, which will be a true communistic state, where we're working for each other. Not some bizarre governmental practice from eastern Europe or Soviet Union or China or Cuba or Venezuela, it'll be correct communion working together. Okay, so I hope that answered that question.

(1:05) I've got a couple of more questions now again going back to this autistic series of questions that we had previously and the subject matter of autistic people.

#### **5. I have a question about the composite third chakra that combines the functions of the lower chakras 1, 2 and 3 in autistic people. (US)**

- **Is the composite chakra less able to process or interpret the emotions or feelings of other humans, who are operating with all lower chakras?**
- **Is that part of the autistics' problem with relating or communicating with other human beings or other beings at higher frequencies?**

Right, I'm going to go back to the first part of it. A composite third chakra is basically one where the functions of the first and second chakras are combined with the third, and this is a function of rising up the frequencies.

When we're a higher frequency form, or we have a human form as a higher frequency, we don't need to be so anchored in the lower frequencies associated with the gross physical, and so the chakras that work with the energies of the first, second and third frequency levels — the first (base) chakra, the second (sacral), and the third (solar) chakra — start to become redundant.

And so what happens then is we get a composite chakra, or a third chakra, which also works on the frequencies of the first and second levels, the base/root chakra and the sacral chakra. And so it's a broader bandwidth chakra, that copes with all those three levels together, but focuses on having chakras in the 4th, 5th, 6th and 7th levels. So the chakras that are dealing with the spirituo-physical and the energetic are the dominant number here, rather than being balanced, for instance, where we have three in the gross physical and one supposedly in the mixing part in between the spirituo-physical and the energetic, which is the astral, the heart chakra, and then the other three being the throat chakra, the spiritual or third eye and the crown chakra being the higher functions. Then you see that the overall pull is towards an energetic system, which is working on higher frequencies.

So actually, the composite third chakra allows the individual body, the incarnate vehicle to operate on the higher frequencies, whilst still having an anchor point in the gross physical, but not as heavy an anchor point that was there. So because of that, people who are autistic or who have a composite third chakra rather than the first, second and third chakras will be more detached from the vagaries of incarnate individuals, who are more immersed in their incarnation, because they'll be experiencing a higher reality, a greater reality.

And so they won't be so involved with the emotions, the human emotions. They won't be so involved with gossip or the need for material wealth or status, they'll be more detached from that. And so they won't be able to process properly or interpret the thoughts, behaviors and actions or the feelings or emotions of other individuals or humans, who are operating on those lower levels. So that's the reason for that. It's basically they're higher frequency, and because they're higher frequency, you know, this third chakra is a function of keeping them grounded slightly, okay. So to answer the second part:

- **Is that part of the autistics' problem with relating or communicating with other human beings or other beings at higher frequencies?**

It is definitely the autistics' problem with relating or communicating with other human beings, yes, because they are functioning on a higher level. They may seem stupid to us or incompetent or incapable to us, but actually they're not. They're operating on a completely different level. They're operating on a level, where they are in a detached, but more caring and loving environment within themselves. And when they communicate with each other, they are experiencing a drastically different level of communication that we, that normal human beings do.

(1:10) In terms of beings at higher frequencies, again it's this confusion with them having to commune and communicate with so-called normal human beings and the disharmony associated with that, which causes blockages with them communicating with beings at higher frequencies. If they dissociated themselves totally with the sort of standard or normal human being, they would be able to operate using their normal functionality in a completely capable and unquestioning way, undoubting way, and they would be able to communicate with other beings at higher frequencies, whether they're incarnate or disincarnate.

Okay, so I hope that answered that question. That's all the questions now, which is very good.

### **Part 3. Meditation**

(1:10:56) Let's go to the meditation, shall we, which is to really get ourselves connecting with the soul in the soul seat. The meditation starts around 1:10:53.

Please download the [MOV File](#) or high quality [M4A File](#) to do the guided meditation with Guy Steven Needler via his website or blog.

(1:30) Closing comments: Well, that's the end of this particular Satsanga on the 23rd of December. Thank you very much for listening to it and to providing questions. It's always a joy to look at the questions and to work with the questions. Again I tend to read them on the spot at the time. I don't pre-read them, so I get the information from Source or from the rest of the greater reality on the spot, so it's unadulterated by me. It comes straight through as it is.

And just Merry Christmas and Happy New Year to you all. The next Satsanga will be on the 27th of January 2018, so if you can send the questions by the 20th of January, that would be fantastic. God's and Source's love to you all and do have a great holiday. Don't forget to look after yourselves and look after those who are dependent upon you. And love everybody and realize that they're just another soul struggling with their incarnation, okay. Source and God's love to you all. Goodbye." END
